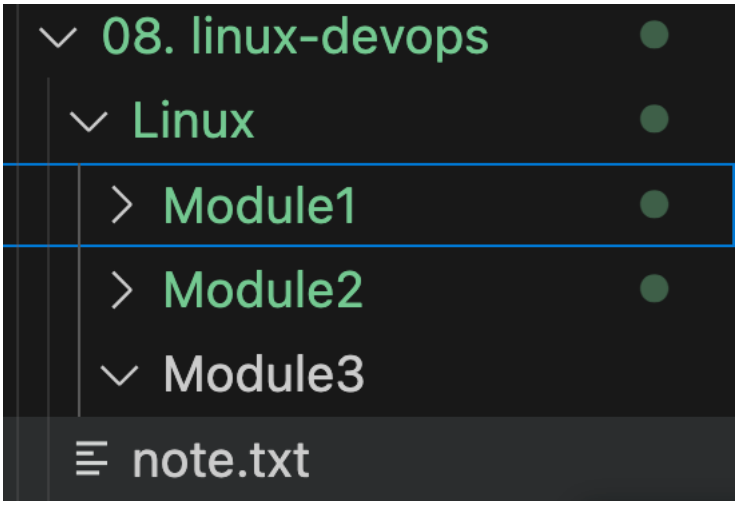
Module-3: Navigation & File Management

Aim: In this task, you will write your first shell script in Linux. The objective is to understand how a shell script is created, saved, and executed.

You will create a script file, add executable permission, and run it to print “Hello World” on the terminal. This helps you understand scripting basics and how automation starts in Linux.



1. nano script.sh

```
  UW PICO 5.09                          File: script.sh                          Modifie

#!/bin/bash
mkdir demo-folder
cd demo-folder
touch sampleFile.txt
cd ..
echo "Hello World-param"
